Dear Mates Italiana,

Following the launch of the new Tensor Composites Range (TC range), we state that the formulations used for the products below are the same as the formulations used in the Tensor Marine range.

The decision of launching these products under a different range is purely commercial as this will facilitate the work of our distributors and some of the end users who deal with different industries by having a completely dedicated range to the composites market whether this is marine, aerospace, transportation, energy, construction, etc.

INFUSION ADHESIVES:

- TC41 - Same formulation as M30
- TC42 - Same formulation as M31
- TC43 - Same formulation as M55

Do not hesitate to contact us should you have any doubt or questions.

With kind regards,

Corrado Alvaro
