Product description

- Easy to spread semi flowable adhesive
- Translucent
- Fast curing time
- Good resistance to yellowing

Areas of application

Bonding of heterogeneous materials like decorative elements on honey comb panels, marble and stones, ceramic elements.

Processing methods

Easy application by hand, with spatula or by dispensing machines. To be applied on dry and clean substrate. Curing at room or moderate temperature (45 °C). Pretreatment of the surface might improve the adhesion results. The additive Y 23 might be useful for materials which are difficult to dry.

Curing/Post-curing

Post-curing is always advisable for Room Temperature curing systems in order to stabilize the component and to reach the best properties. It is necessary when the component works at a high temperature.

Storage and stability

Filled epoxy resin and its amine based hardener can be stored respectively for one year and two years in the original sealed containers stored in a cool, dry place. The hardener is moisture sensitive therefore it is good practice to close the container immediately after each use.

Handling precautions

Refer to the safety data sheet and comply with regulations relating to industrial health and waste disposal.

IO-00-00/200-000-000 = Elantas Europe internal test method. The correspondent international method is indicated whenever possible; nd = not determined; na = not applicable; RT = TA = laboratory room temperature (23±2°C); conversion units: 1 mPas = 1 cPs 1MN/m² = 10 kg/cm² = 1 MPa

(*) for larger quantities pot life is shorter and exothermic peak increases; (**) the brackets mean optionality; (***) the maximum operating temperature is given based on laboratory information available being it function of the curing conditions used and of the type of coupled materials. For further possible information see post-curing paragraph.
