**Recycled Content in ArmaForm GR, Eco, MultiCore, Foil, ArmaStruct and ArmaShape**

Hereby I declare that the total recycled content in ArmaForm family produced by Armacell is higher than 90%. The residual less than 10% of the recipe constituents are the foaming additives. The total amount of polyethylene terephthalate (PET) is therefore sourced from recycled polyester streams.

Recycled content meets definitions of the international standard ISO 14021:1999: Environmental labels and declarations - Self-declared environmental claims (Type II environmental labeling)\*.

Dr. Justyna Dolega

Global Innovation Manager, Thermoplastics

\**Recycled content*: the proportion, by mass, of recycled material in a product or packaging. Only pre-consumer and post-consumer materials shall be considered as recycled content, consistent with the following usage of the terms:

*Pre-consumer material*: material diverted from the waste stream during a manufacturing process. Excluded is

reutilization of materials such as rework, regrind or scrap generated in a process and capable of being reclaimed within the same process that generated it.

*Post-consumer material*: Material generated by households or by commercial, industrial and institutional facilities in their role as end-users of the product, which can no longer be used for its intended purpose. This includes returns of material from the distribution chain.
