Dear Customers,

Over the past years Armacell has been developing a patented technology to produce ArmaFORM PET foam from post-consumer contents.

Such process enables us to offer you today, a sustainable, high-quality and cost effective “green colour” PET foam: ArmaFORM PET GR, which is not altering properties in comparison to our virgin PET based foams.

While we are transitioning also to this technology for our FR range (called GFR when includes recycled PET materials) we still have some production made entirely from virgin PET raw material base and thus white in colour.

Consequently, we still have transition period in our production, resulting in the manufacture of different nuance of green colour foam boards, due to the fading in/out level of white virgin PET in the mix.

Moreover, recycled PET streams used vary in terms of green shades, and so our PET Foams.

We want to emphasize that this is not impacting characteristics of the foam and confirm that such “variances in the tone of green colour” may be supplied as part of ArmaFORM PET GR/GFR orders.

Should you require further information, please do not hesitate to contact us.

Yours sincerely,

Henri Chapelle

GM Sales & Marketing – PET Foams
